

Dried Apricot Pecan Pie (serves 8-10)

1 Bring apricots and water to a boil and let simmer (at low heat) for about 10 minutes. Then drain the apricots and blend well with the roasted pecan and walnuts, sugar, jam and cinnamon.

2 Spread the topping evenly across the (unbaked) tart shell and bake at 170°C (340°F) for about 30 minutes or until the edges turn golden brown.

3 Chop the milk chocolate and add the honey in a mid- sized bowl. Melt sugar in a saucepan and let simmer until it takes on a golden color and starts to bubble slightly, then stir in heavy cream (be careful, this could get messy!) until the mixture's consistency looks even. Remove from stove.

4 Pour the mixture over the chopped chocolate/ honey and stir until the chocolate has fully melted, add the pecans and pour the mass evenly over the already baked pie shell. Chill for about two hours.

5 For the final touch, melt semi- sweet chocolate and heavy cream in a pan while stirring. Once melted, pour over the tart and chill again for another two hours.

Dried Apricot Pecan Pie (serves 8-10)

Recipe source: cuisine.at, adapted

Required time: preparation 30 min., baking 30 min.

Instructions for the pie bottoms/ shells, please [see here](#)
